

Power Rake KP540

4000 series

The KP540 **Power Rake** is designed for leveling rough ground and new yard installations, as well as removing surface rocks and debris. Its compact design allows the operator to work in tight quarters including around corners and edges.

Seventy-two replaceable carbide tips pulverize and refine the soil. Materials can be moved forward or to either side by hydraulically angling the drum left or right. The drum can also be reversed to allow back-dragging of soils and cleaning off debris. A rotating handle raises or lowers the rotor in 1/8th inch increments allowing 3½ inches of travel.

Adjustable side wings can be lowered on both sides for routing material.

Standard Features:

- Single Rotating Handle Height Adjuster – for fast and accurate adjustments
- Replaceable Carbide Tips (without removing the rotor)
- Forward & Reverse Rotation from the operator seat
- Hydraulic Driven Rotor
- Hydraulic Power Angle Control
- Adjustable End Plates for material routing
- Ventrac Minute Mount System
